Laricyl®
Pore minimizer

Asia Pacific | June 2023

UNHAPPY WITH YOUR LARGE PORES ?

People commonly complain about their skin pores

ENLARGED PORES ARE NOT INEVITABLE

ACROSS ASIA

2.3bn Estimated market size (2020 – 2026)

8.9% CAGR (2021-2026)

Scenario

Consumers often find their pores **too dilated** and mostly associated with an **over-shining** skin

Their appearance may be **worsened** by influence of…

- **Hormones**
- **Climate**
- **Lifestyle**

START A VERY SIMPLE AND EFFECTIVE ROUTINE WITH

Laricyl

(*) Men's and Women's Facial Skincare - Europe - 2018

NATURE IS FULL OF MILLIONS OF NATURAL RESOURCES

150.000
mushroom species in nature

Use of mushrooms in
skin care
is on the rise

Contribute to a more **holistic health** and **wellness**

ONE MUSHROOM SPECIFICALLY DESERVES OUR ATTENTION
FOMES OFFICINALIS

BASF
We create chemistry

FOMES OFFICINALIS

ALSO KNOWN AS LARICIFOMES OFFICINALIS

Agarikon, Conks of larch

Folk medicine mushroom of ancient Europe, used to make bitter herbal medicine

Reported **curbing sweating** and **astringent** properties.

Supernatural powers facilitating contact with spirits: carved fruit bodies as Shaman grave guardians (Ghost bread)

Elixir of long life

Protection against inflammation and viral infections

Medicinal and spiritual role

(Grienke, 2014; Girometta, 2019; Bhargav 2008).

BASF
We create chemistry

Laricyl

A sucess story

OUR 20 YEARS

tried-and-tested ingredient, extracted from the Fomes officinalis mushroom, for PORE TIGHTENING.

Sustainability issue

Wild *Fomes officinalis* is an endangered species with a decreasing population.

BCS is committed to preserve natural resources and started in 2018 a project for a sustainable sourcing.

BASF
We create chemistry

Laricyl UPGRADED

NEW SOURCING

Embedded in our **Responsibly Active Program**

FROM WILD HARVESTING
TO CULTIVATION BY SOLID STATE FERMENTATION

BASF
We create chemistry

Laricyl

UPGRADED BC10206

NEW UPGRADED LARICYL VERSION FROM FOMES OFFICINALIS

PRODUCED BY SOLID FERMENTATION AND CLINICALLY-PROVEN **IMMEDIATE PORE TIGHTENING EFFECT**

Solid-state fermentation

Production of the mycelium in EU, grown on solid medium in controlled incubation room

Organic

Organic certified mycelium

99.7% Natural origin

Using butylene glycol from natural origin, no preservative

Composition

Same INCI composition as previous Laricyl version, but w/o phenoxyethanol

BASF
We create chemistry

LARICYL

UPGRADED BC 10206

THE NEW PROCESS OF PRODUCTION OF LARICYL

Solid State Fermentation

BASF
We create chemistry

THE BIOTECHNOLOGICAL PROCESS OF

SOLID-STATE FERMENTATION

Definition

Fermentation process in which microorganisms grow on solid materials

Particularly adapted for mushroom

Mushroom typically grows in nature on solid substrates (soil, piece of woods, barks…)

Advantages

Low water consumption

No harvest from wild

Controlled conditions
Production in incubation room

Organic
Organic certified mushroom mycelium

LARICYL DOES NOT DISTURB THE HYDRATION LEVEL OF THE SKIN

Ex vivo test on stratum corneum, conductimetry over 24h
(measurements at 0.5, 1, 2, 4, 6, and 24h, area under the curve, increase over placebo)

On top of a great efficacy on pores, Laricyl **preserves the skin moisturization**

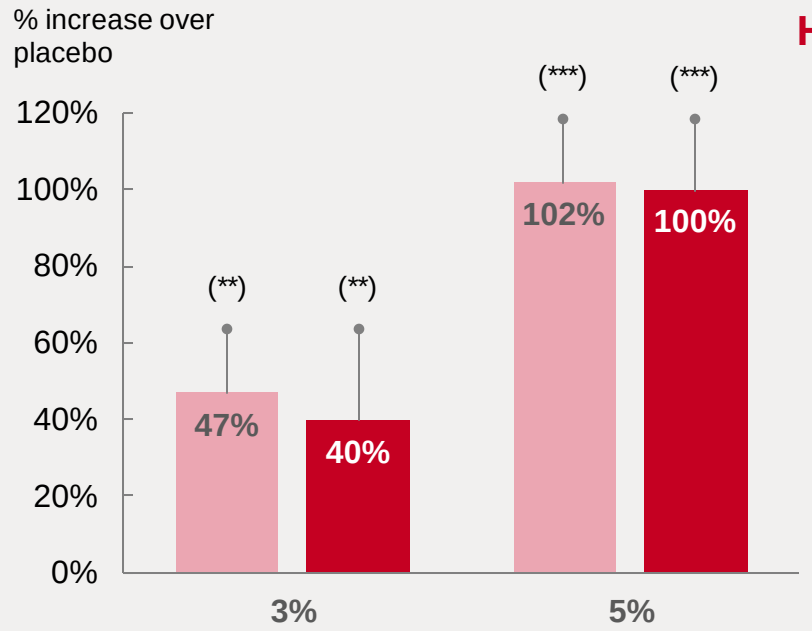

Moisturizing effect

Pore tightening effect of Laricyl **does not dry** the skin

Laricyl **moisturizes** the *stratum corneum*, and may contribute to skin suppleness

Conductimetry on *stratum corneum* (Hydration)

Hydration Up to 100%

BASF
We create chemistry

Laricyl

BC10206

Solid-state fermentation

Biotechnological production of organic *Fomes* mycelium in EU

99.7% Natural origin

Fomes officinalis liquid extract without preservative

Immediate effect

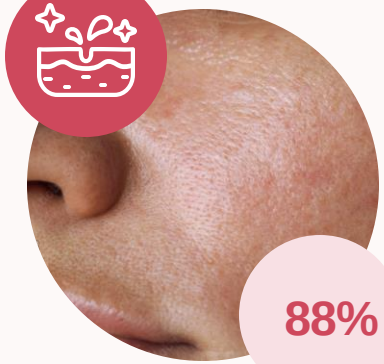

Minimizes pores (*in vivo*)

76%

Perception of smaller pores

Reduces shine (*in vivo*)

88%

Perception of shine reduction

Maintains skin moisture (*ex vivo*)

Up to 100%

Hydration
