Care Chemicals

The presence of traces of the below declared substances stemming from raw materials used and/or being formed in the manufacturing process of the product, is not intended and is technically unavoidable.
In accordance with Article 17 of the Cosmetics Regulation (EC) 1223/2009 such traces of prohibited substances are accepted.

Substance	Description / Status	Limits
Allergens	Highly unlikely to be present	
CMR substances	Based on our current knowledge of our production process, raw materials and equipment used, we do not expect listed CMR substances according to Annex VI of the CLP Regulation (EC) 1272/2008 to be present.(bibliographic data)	
CMR substances	Not tested	
Diethylene Glycol	Is present:	May contain max. 3 ppm [CALCULATED]
Glycol ethers	Based on information concerning the raw materials, production process, and equipment used the following glycol ethers are not likely to be present: Butyldiglycol (CAS No 112-34-5), Ethyldiglycol (CAS No 111-90-0), 2-Butoxyethanol (CAS No 111-76-2)	
Glycol ethers	Not tested	
Heavy metals	Based on our actual knowledge of our production process, raw materials and equipment used, we do not expect heavy metals to be present.	
Heavy metals	Not tested	
Origin of compounds	BSE-free	
Origin of compounds	GMO-free	
Pesticides	Based on our actual knowledge of our production process, raw materials and equipment used, we do not expect pesticides to be present	
Pesticides	Not tested	
Phthalates	Based on our current knowledge of our production process, raw materials and equipment used, we do not expect listed Phthalates* to be present.	

® = registered trademark of BASF in many countries ™ = Trademark of BASF

Phthalates	Not tested	
Polycyclic aromatic hydrocarbons	Are the following requirements met?: Benzo-(a)-pyrene: <1 ppb Fluoranthene: <10 ppb Benzo-(b)-fluoranthene: <10 ppb Benzo-(K)-fluoranthene: <10 ppb Benzo-(ghi)-perylene: <10 ppb Indeno-(1,2,3,cd)-pyrene: <10 ppb Not tested as not to be expected from the production process	
Residual solvents	Complies with the recommendation in the “ICH Note for Guidance on Impurities: Residual solvents (CPMP/ICH/283/95)”:	Ethyleneglycol max. 1.86 ppm [CALCULATED] Ethyl Alcohol max. 10 ppm [CALCULATED] Acetic Acid max. 15 ppm [CALCULATED]

* According to Annex II of Cosmetics Regulation (EC) 1223/2009

1. "Not likely to be present" means: The substance(s) is/are not used as a raw material and are not known to be formed during the manufacturing process and therefore not tested for.
2. "Not likely to be present due to the process" means: The substance(s) is/are an unavoidable impurity either present from the raw materials or formed during the manufacturing process. However due to the nature of the manufacturing process, the particular substance is not expected to be present in declarable amounts and therefore not tested for.
3. When a value is indicated: The substance(s) is/are either used as a raw material or known to be formed during the manufacturing process and which cannot be completely removed and present at the indicated level. When levels are indicated then values are as expected immediately after production and not necessarily after prolonged storage and/ or transport.
4. "Compliance is monitored" means: The substances itself or representative material is monitored at intervals for compliance with the listed Guideline and/or the raw material grade used is of an appropriate purity to satisfy the requirements.
5. Note: Only substances which are intentionally added or known to be formed are scope of the BASF product documentation. The potential presence or absence of non-documented substances are excluded from any form of testing or monitoring if not suspected to be present.
