

ANASENSYL® LS 9322

An innovative concept for sensitive skin: tolerance enhancer

MEN'S CARE CONCEPT

BASF We create chemistry | Care Creations™

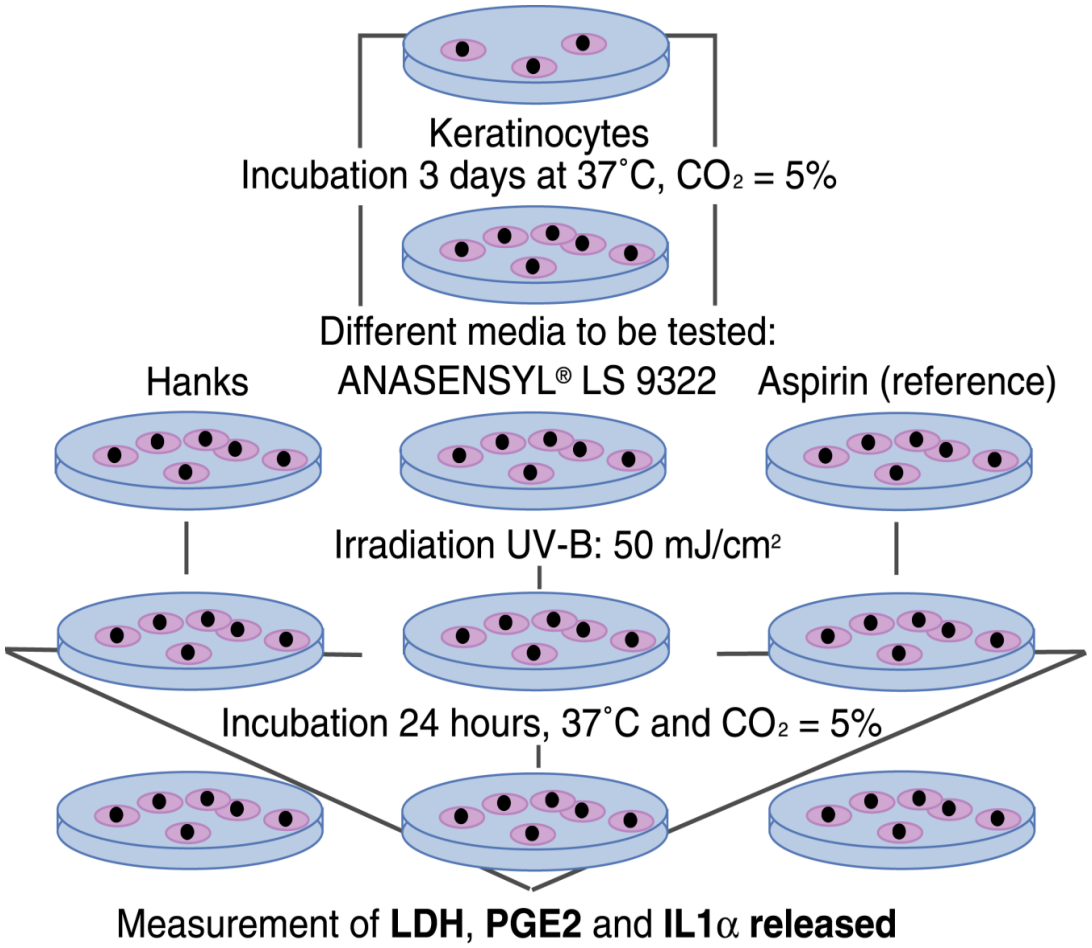

Components

Components	Origin	Activity
Flavonoid	**Horse Chesnut** *(Aesculus hippocastanum L.)*	**Decongestive** and **local anti-inflammatory**
Saponoside	**Liquorice** *(Glycyrrhiza glabra)*	**Corticoid-like effect** Strengthens the peripheric micro-vascular tonicity
Caffeine	Synthesis	**Inhibition** of **phosphodiesterases** of cyclic nucleotides
Zinc gluconate	Botanical	**Active oligo-element** for keratinocyte and fibroblast metabolism

Anti-irritant Effect On Keratinocytes
In vitro

The use of cosmetic products can lead to a hyper reactivity of skin.

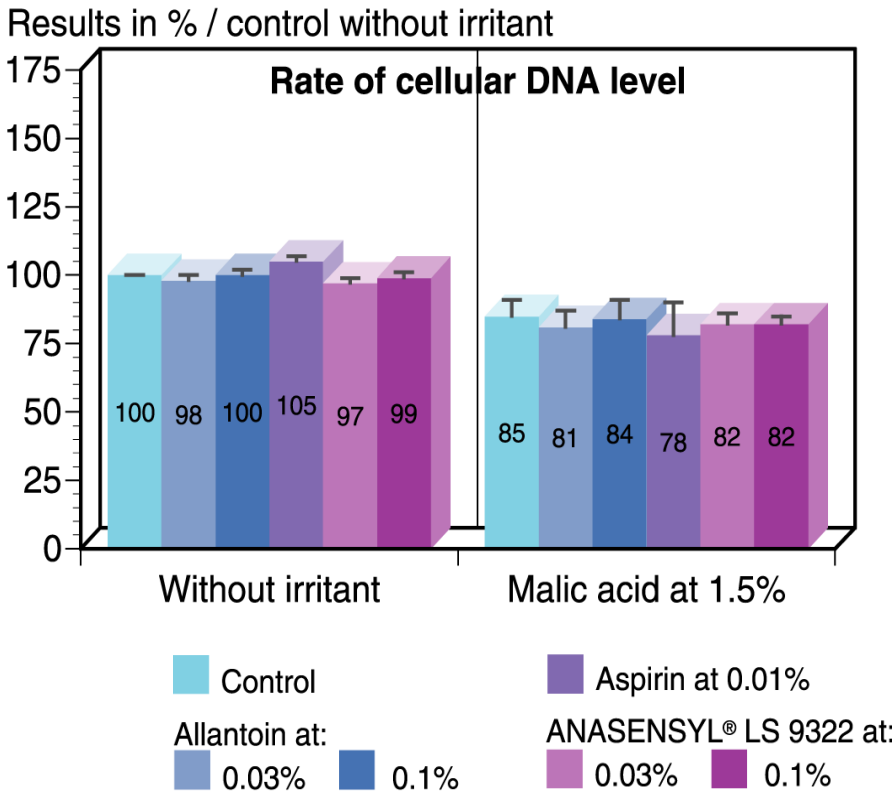

Two ingredients mainly used in cometic products and well-known for their irritant effect have been selected:

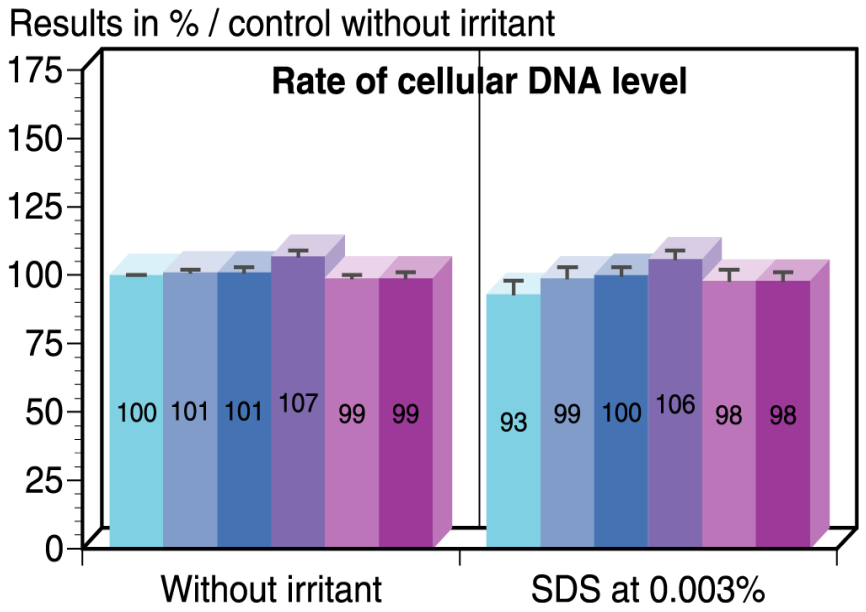

- AHA: Malic acid,
- a surfactant : Sodium dodecyl sulfate

Calming Effect On Sensitive Skin / Capsaicin Stinging Test

Comparison of the anti-inflammatory effect of:

- cream containing **1% ANASENSYL® LS 9322,**
- cream containing **1% reference substance** (commercial product claiming a soothing effect on sensitive skin),
- **placebo** cream.

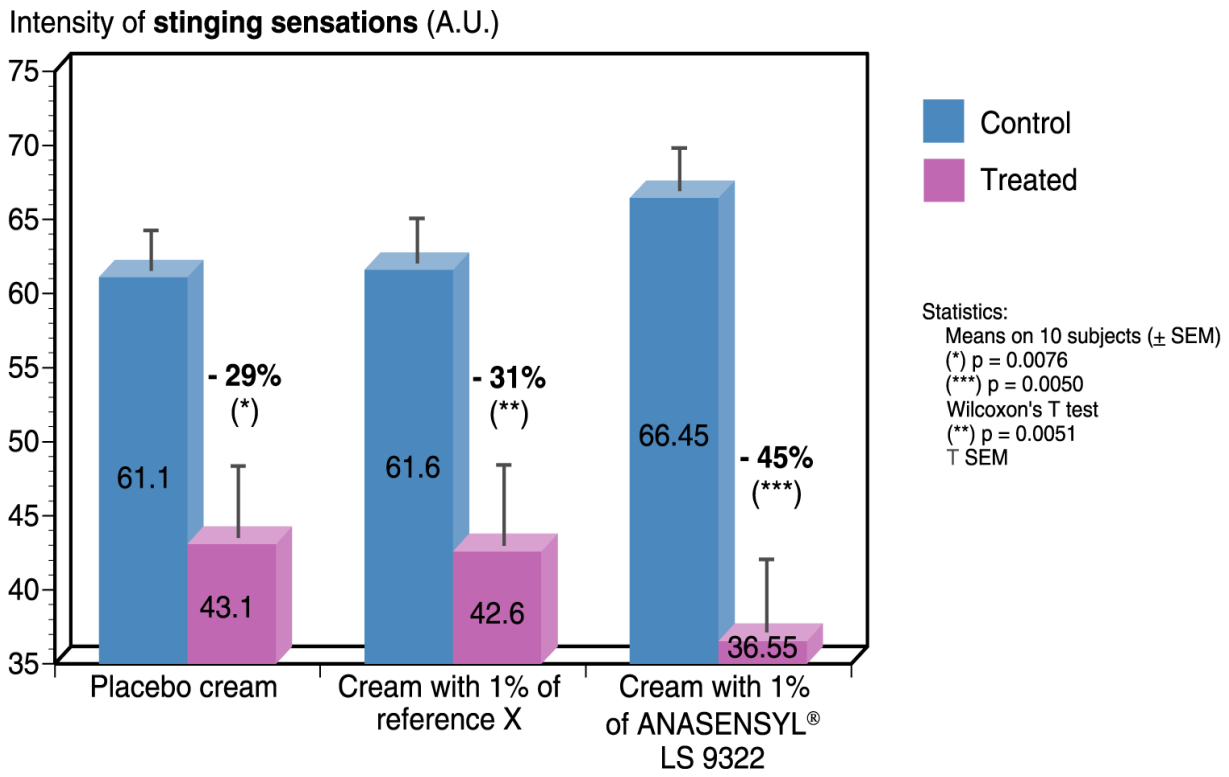

Clinical study on 10 volunteers with sensitive skin to capsaicin.

Application of the cream on a cheek (the other cheek is used as a control) 30 minutes before capsaicin application.

Stinging sensation and **erythema** are measured.

Calming Effect On Sensitive Skin / Capsaicin Stinging Test

Stinging sensation

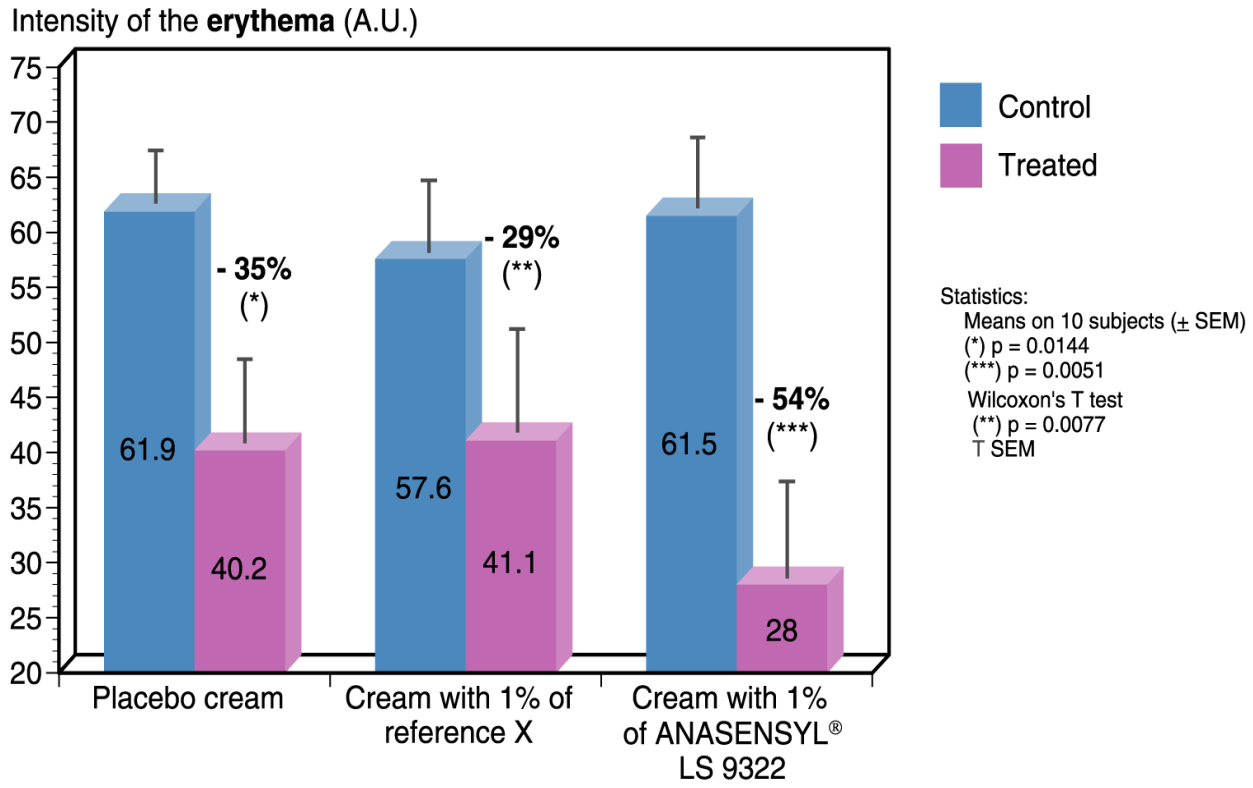

Best and significant results with **ANASENSYL® LS 9322** on stinging sensations

Anti-redness Effect After Shaving
Clinical test

The anti-redness effect has been demonstrated by application of an after-shave balm containing 1% ANASENSYL® LS 9322 in comparison to placebo.

The test has been carried on 28 male healthy volunteers having redness and irritation on the face during shaving.

BASF Creations
We create chemistry

Anti-redness Effect After Shaving
Clinical test

Protocol

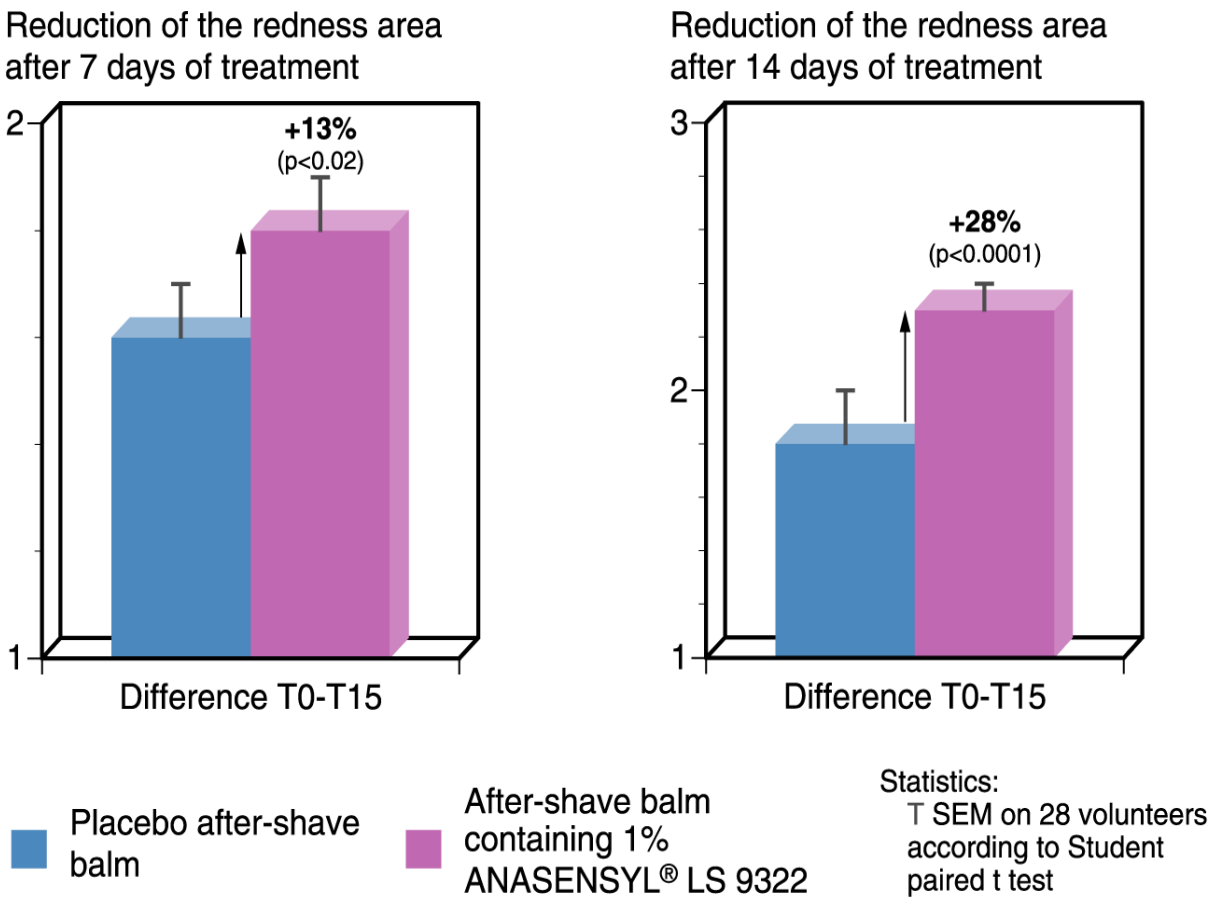

Randomized single application after shaving every morning for 2 weeks.
On one side application of the placebo after-shave balm.
On the other side application of the after-shave balm containing 1% ANASENSYL® LS 9322.

Visual subjective appraisal by a beautician of the redness area and intensity according to a semi-quantitative scale from 1 (not at all) to 9 (a lot):

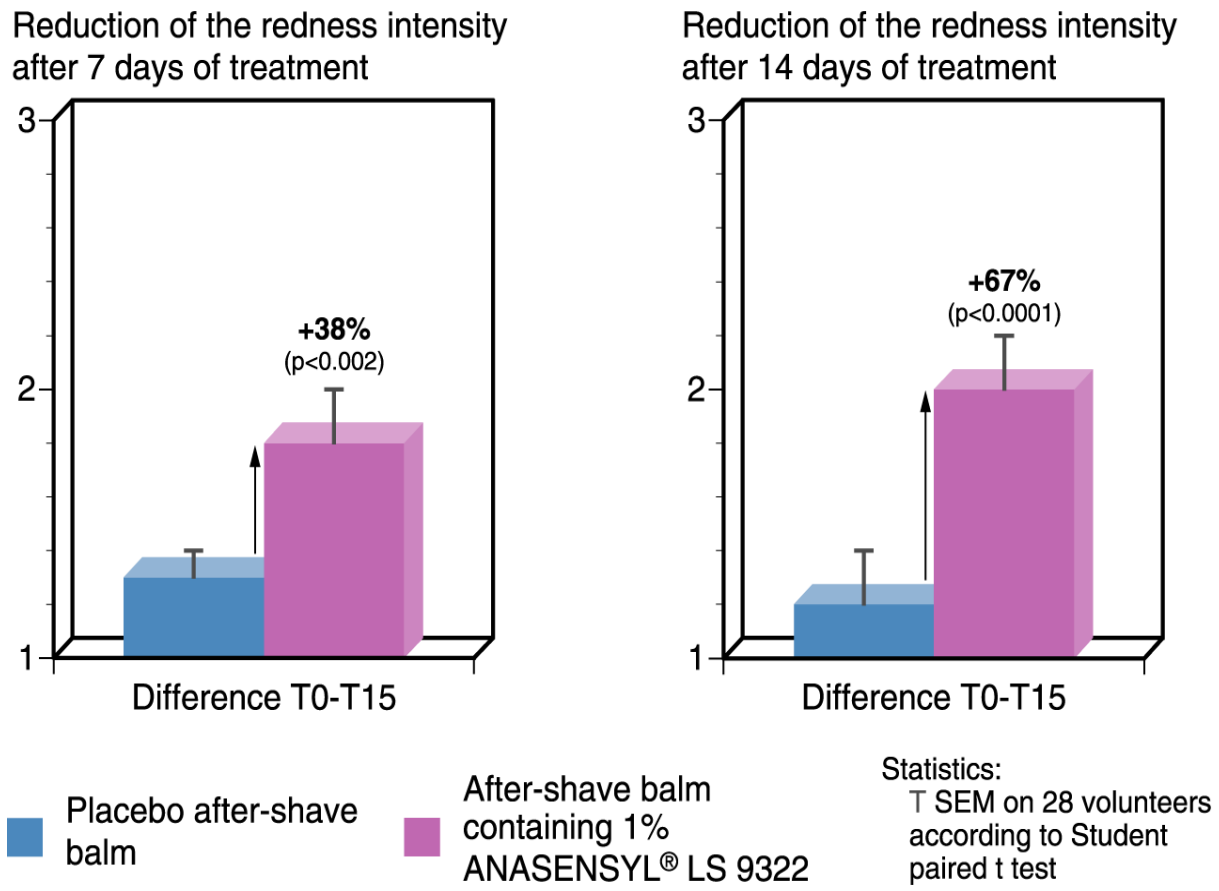

- before treatment after the first shaving,
- after 7 days and 14 days of treatment:
  - T0 = 5 minutes after shaving before product applications,
  - T15 = 15 minutes after product applications.

Anti-redness Effect After Shaving
Clinical test

Anti-redness Effect After Shaving
Clinical test

Anti-redness Effect After Shaving
Clinical test

Conclusion

The after-shave balm containing 1% ANASENSYL® has significantly decreased the skin redness after shaving.

This effect is improved with the number of applications.

ANASENSYL® has a good anti-redness activity on male skin submitted to daily stresses.

BASE Creations
We create chemistry

Conclusion

- Soothing activity against the main daily stresses.
- Improvement of skin tolerance.
- Anti-inflammatory effect proven.

More than an «usual» anti-inflammatory effect (immediate soothing effect), acts as a real pro-active (Tolerance enhancer).

Daily applications of ANASENSYL® allow to decrease the reactions towards aggressions.

ANASENSYL®,

a total answer to male skin sensitivity

a synergistic pro-active for agressed skin.

BASE Creations
We create chemistry

Characteristics

Aspect : white powder, of a characteristic odor

Dose of use : 0.5 - 1.5%

Solubility : soluble in water, insoluble in oils and fat

INCI Name : Mannitol (and) Ammonium Glycyrrhizate (and) Caffeine (and) Zinc Gluconate (and) Aesculus Hippocastanum (*Horse Chestnut*) Extract
